Image Gallery: A collection of images including Chandra data that range in object type and distance.
(Credit: NASA/CXC/SAO)

Caption: This collection represents a sample of objects from across the cosmos that Chandra observes in X-rays. The objects in the top row (from left to right) are the supernova remnant E0102-72.3, the galaxy cluster Abell 370, and the star forming region Messier 8. The bottom row contains (left to right) the Orion Nebula, the spiral galaxy Messier 33, and the Abell 2744 galaxy cluster. Each of these images contains X-rays from Chandra and data from other wavelengths and telescopes in different colors.
